*Debbie Siegenthaler RN, MSN*

### COVID 19 Case Update

**Iowa County** – The Iowa County Health Department announces an additional lab confirmed case of COVID 19 in an Iowa County resident. This brings the total number of positive cases to 22. The most recent case is an individual between the ages of 50 and 60 isolated at home. Iowa County Health Department has contact with all confirmed cases and reaches out to those who may have had close contact to each confirmed case. The Health Department assists in actively monitoring their health while they are under quarantine.

New cases will continue to be reflected on our Iowa County Health Department Facebook page each day (Monday through Friday). The State of Wisconsin [DHS website](https://www.wisconsin.gov/dhs), will continue to be updated each afternoon with county specific numbers. Going forward, we will not be conveying each positive case through a press release unless we are experiencing rapid or concerning changes in our metrics. All positive cases will continue to be reported to the state and followed up on as they have been. We have developed, through our Iowa County COVID 19 Dashboard, a multi-level way to monitor the picture in our county.

All social interaction has some level of risk for contracting COVID-19. The best way to protect yourself and others is to continue maintaining your physical distance from others, stay away from large groups, stay home when you are sick, wash your hands, and please wear a cloth face covering. People need to know the risks and balance those with the benefits to make the best decision for their families. But in all cases, people should understand their personal responsibility to not unknowingly spread infection to someone else.

We want to stress that the protective measures listed above remain important. “We know some people may think they are unnecessary but please understand that the virus is still in the community. We can and should move forward but we will do so slowly and safely”, says Debbie Siegenthaler, Iowa County Health Department Director. COVID-19 doesn't spread itself. People spread it. We don't have a cure or a vaccine yet. Our best tool is isolation for those we know are sick and physically distancing ourselves from others. Each of us represents an opportunity to interrupt the transmission of this virus. This week's COVID 19 Dashboard reveals that 83% of recent cases did not have direct exposure to a person known to have COVID 19. This means they are not sure how they were exposed which means that we are experiencing community spread or a wide circulation of the virus. This fact, coupled with significant increases in cases in neighboring counties, also means we need to remain cautious.
