CRAIG HARDY HIGHWAY COMMISSIONER WWW.IOWACOUNTY.ORG

On April 19, 2023 a Public Information Meeting was held for the proposed reconstruction / improvement of safety at the CTH Y/YZ and USH 18/151 intersection east of Dodgeville.

Meeting hosted by WisDOT. Project ID# 1204-00-06/76

Background - Between 2002 – 2014; WisDOT hosted a number of Public Informational Planning meetings in Iowa / Dane counties while performing a Limited Access Study evaluating the conversion of the USH 18/151 corridor between MM47 interchange at USH 18 in Dodgeville and the USH 12/18 Beltline in Madison. The conversion study process is to develop alternative improvement concepts a highway could go through to convert from at grade intersection control to interchange control intersections; with an outcome of creating a list of preferred alternatives.

WisDOT began the process at the time based on an FHWA guidelines trigger for conversion of a

WisDOT began the process at the time based on an FHWA guidelines trigger for conversion of a divided highway / freeway to a limited access expressway is in the range of 20,000 – 25,000 ADT (Average daily Traffic) vehicle counts. Of note, the portion of USH 18/151 in Iowa County near this intersection is around 15,000 to 16,000 ADT. By contrast, the traffic volume as you get closer to Madison (IE the intersection with CTH PD in Fitchburg) is around 22,000 ADT. Hence in 2014, the Limited Access Study was completed by WisDOT and accepted by FHWA with the issuance of a FONSI – Finding of No Significant Impact – with regards to the various environmental concerns and issues with a project of this size. The study concluded with various recommendations for improvements. In the decade since the study completion, interchange development has occurred at 2 of the 8 corridors identified in the study being at MM52 – CTH BB near Ridgeway as well as CTH PD in Verona / Fitchburg near the beltline. With regards to the other six locations recommended for limited access, the next steps for a project of this complexity / size, typically would then be mapping of right of way to reserve the preferred alternative highway footprint for future highway improvements; then gradually funding of each project on a 4-6 year cycle based on funding availability, traffic volumes. accident history, and other factors. However; the project was not enumerated by WisDOT so there has been no further progress in the planning or funding for the other major projects.

Intersection Safety Improvement Proposed - Due to consistent and growing accident history for this particular location, WisDOT is proposing to make some improvements for safety at the intersection through use of HSIP – Highway Safety Improvement Program funding. HSIP is a federally funded 80-20 program; where typically lower cost faster to complete improvements are made with a primary objective of reducing severity and frequency of accidents. This intersection has resulted in three – 3 fatalities between 2008 – today. In addition, there have been multiple other accidents at the location including a 19 vehicle pile-up in circa 2013/14 involving some 11 semi-trailer units. HSIP project improvements typically include curve straightening, high friction surface treatments, guardrail enhancements, signage, and similar projects. With the passage of the BIL funding, additional funding is available to make improvements at this intersection; but not to the level of funding an interchange improvement. The various proposed improvements which follow are in the range of \$1.5 to \$2.0M

versus the \$0 do nothing approach. The costs for an interchange improvement at this location would be in the range of \$18M - \$24M.

The meeting held by WisDOT is to determine / solicit what the public in the vicinity of the project would like to see for improvements. Through this process; the designers have evaluated some 6 options for consideration or feedback which are summarized in the attached diagrams.

Alternative 1 = No build or Do Nothing. At a cost of \$0, WisDOT would drop the proposed project and do nothing. This is not preferred or recommended by WisDOT but is an option. With no changes to anything; presumably the accidents / incidents would continue to occur indefinitely with varying degrees of severity.

Of note, for the other 5 alternates presented by WisDOT, all of them would include an enhancement or change to the intersection geometry from the existing 60-degree to a proposed 80+-degree approach angle; which would enhance visibility in both directions by aligning drivers perpendicular to the crossing highway for better visibility. That revision in and of itself reflects a significant share of the proposed project costs regardless of which option is chosen. See Diagram for roadway alignments. Also of note, most studies indicate the inclusion or enhancement of street lighting can improve safety and reduce accidents significantly. All of these options may include some component related to additional lighting as well.

Alternate 2 – Realign intersection, Maintain Crossover Traffic, and ADD Median Left Turn Lanes. The intersection would be shifted to a new alignment for a 80-degree versus 60-degree crossing. The median of USH 18/151 would be improved to include a left turn lane in both directions. All other movements would still be allowed – right turns, crossovers, side road left turns, and mainline left turns would be provided for all roadways, similar to today's usage.

Alternate 3 – Realign intersection, Eliminate Crossover, and Add Right in / Right Out / Left in only. The median CTH Y/YZ crossover would be closed off and Right / Left turn lanes would be installed to channel USH 18/151 traffic into a right turn only or left turn only movements, no cross traffic. This alternate may lead to increased median u-turns at other locations along USH 18/151 as drivers search for ways to continue onto CTH Y or YZ from CTH YZ or Y.

Alternate 4 – Realign intersection, Close Median, and Add Right turn lanes. The median crossover would be closed off and only Right hand turn movements would be allowed at all sides of the intersection. No median corossover or u-turn traffic movements would be allowed. This also has the potential to increase median u-turn movements at alternate at-grade crossing locations as drivers search for other methods to make the movements or turns they desire to make.

Alternate 5 – Realign intersection, Add Right turn lanes, and Add Restricted Left Turn Lane median crossing u-turns. The median crossover is closed off at the CTH Y/YZ intersection eliminating crossover traffic movements and left hand turns at the intersection – eliminates all intersection crossover movements. Traffic makes a right turn onto USH 151, enters the left lane and turns into the median, making a u-turn to continue down USH 18/151 or turn right to continue on CTH Y/YZ. No left hand turns are allowed directly at the intersection. This design enhances safety by reducing the potential for side impact accidents although front-rear accidents may occur more frequently they are less severe.

Alternate 6 – Realign intersection, Add Right turn lanes, Left turn lane median u-turns, and Add Median Left turn lanes. The design is similar to alternate 5, although it allows left hand turning movements off of USH 18/151 directly at CTH Y / YZ. If turning left onto USH 18/151 from the CTH,

you need to negotiate a median u-turn movement to turn left. Although very similar to alternate 5, the option allows more direct off access from USH 18/151 to the CTH.

Overpass option - There is one other option to the various alternates for proposal of intersection improvements at this location being other than an interchange, and that would be to create an overpass. WisDOT has not studied this alternate, as they did not feel the communities would want to lose the USH 18/151 intersection access at the location. The proposal would completely eliminate the at grade intersection by placing a bridge on CTH Y / YZ to go over or under USH 18/151 at the location. My only caution with the overpass option is once installed, it may be harder to get a conversion to an interchange as the more time goes by the less likely of a conversion without local funding. The decision to upgrade the intersection to an interchange is primarily borne by cost / funding and ADT – traffic volumes. Typically, WisDOT looks at areas with ADT's of 2,000+ on the side road to make an interchange improvement. The current volumes of CTH Y / YZ are around 950, and without some type of economic growth or other travel factor are unlikely to change much over the next decade.

From my perspective, the preference is for an interchange over any other option here as it would enhance safety, lend itself for economic development, and enhance community connectivity. I recognize the significant costs associated with it versus what other priorities which the state may have. Hence, it will most likely be years before the County sees another interchange constructed on the USH 18/151 corridor; unless we are able to request enumeration of an interchange project at CTH Y / YZ. To do that we would request enumeration into the Majors program through the offices of State Senator Howard Marklein and State Representative Todd Novak as USH 18 / 151 is a part of the backbone corridor. Otherwise, without some type of land development or economic development, it will most likely be many years until the County sees an interchange improvement at the location. I have similar concerns about the growing number of accidents with an at-grade crossing intersection of CTH K near Barneveld, also along USH 18/151.

At the end of the day, I feel the main objective first and foremost should be for safety. I support the safety improvement of the intersection which includes a re-alignment of the approaches of CTH Y / YZ. And of all the options; feel numbers 3, 5, and 6 would meet the objective to reduce the number and severity of the accidents at the location. Of these, alternate 5 is most likely the best alternate to greatly reduce if not eliminate the opportunity for side impact accidents as it practically eliminates the USH 18/151 mainline crossover movement. Due to the intersection complexity created by the type of improvement and the lack of other similar improvements throughout the corridor Dubuque to Madison, options 3 and 6 are probably safer to navigate for drivers who are unfamiliar to the location.

I encourage you to review the handouts attached, then provide feedback direct to the WisDOT Project Manager – Derek Potter regarding preference. WisDOT will consider direct feedback selecting a preferred alternative due to the nature of the improvement type.

Public Comment received until May 19, 2023. Forward comments to:

Derek Potter WisDOT – SW Region 2101 Wright Street Madison Wis. 53704

WisDOT: Public meeting for US 14 in Dane and Iowa counties

For release: April 26, 2023

For more information, contact:

Hannah Punzel, Region Communications Manager

(608) 246-7907, hannah.punzel@dot.wi.gov

Public meeting for US 14 in Dane and Iowa counties

The Wisconsin Department of Transportation (WisDOT) is conducting a public involvement meeting to discuss the US 14 resurfacing project from Oak Street in Arena to Walter Road in Mazomanie, Dane and Iowa counties.

The meeting is scheduled for Tuesday, May 9, 2023, from 5:00 to 7:00 p.m., at Arena Village Hall, 345 West Street, Arena. The objective of this meeting is to familiarize the public with the purpose and need for the project and to obtain input on the proposed improvements.

In addition to resurfacing the US 14 pavement, upgrading guardrail, and new pavement markings, the project will extend a box culvert just west of Arena and replace a wingwall on a box culvert west of Mazomanie.

Construction is scheduled for 2030 but advanceable to 2025 if funding is available.

Adjacent property owners are encouraged to attend the meeting. If unable to attend or for more information contact WisDOT Project Manager Steve Porter at (608) 243-3366, steve.porter@dot.wi.gov. Written comments can be mailed to Steve Porter at 2101 Wright Street, Madison, WI 53704.

Citizens who are deaf or hard of hearing and require an interpreter may request one by contacting Steve Porter at least three working days prior to the meeting.

WisDOT: Public meeting for WIS 130 bridge replacement project in Lone Rock

For release: April 25, 2023

For more information, contact:

Hannah Punzel, Region Communications Manager (608) 246-7907, hannah.punzel@dot.wi.gov

Public meeting for WIS 130 bridge replacement project in Lone Rock Meeting to focus on road and channel closures

The Wisconsin Department of Transportation (WisDOT) is conducting a public involvement meeting to discuss road and channel closures for the WIS 130 bridge replacement in Lone Rock, Iowa, Richland, and Sauk counties.

The meeting is scheduled for Tuesday, May 9, 2023, from 4:30 p.m. to 6:00 p.m., at Lone Rock Community Hall, 214 N. Broadway Street, Lone Rock, WI. The objective of this meeting is to familiarize the public with the road and channel closures.

Adjacent property owners are encouraged to attend the meeting. If unable to attend or for more information contact WisDOT Project Manager Greg Brecka at (608) 245-2671, gregory.brecka@dot.wi.gov.

Citizens who are deaf or hard of hearing and require an interpreter may request one by contacting Greg Brecka at least three working days prior to the meeting.

County Luncheon for Golfers
Lunch served in tent by golf course

Sponsored by:

11:00 am - 12:00 pm

Non-Golfer Luncheon-Sponsored by:

Lunch served in Conference Center Rooms A thru I

11:00 am - 5:00 pm

Golf Outing at Chula Vista Resort

11:45 am - 2:00 pm

Wine and Micro Brew Tours (loading by registration lobby)

Sponsored by:

2:00 pm - 5:00 pm

Cedar Corporation Special Tent Reception (by golf course)

Music By: The Drovers Live Auction at 5:30 pm Dave Bell Auctions, LLC

5:00 pm - 5:30 pm

Golf Awards (in the tent by golf club house)

6:30 pm - 12:00 pm

Hospitality Rooms

DINNER IS ON YOUR OWN

Wednesday,	June	7,	2023
------------	------	----	------

6:30 am - 8:15 am

Breakfast: Served in Conference Center Rooms A thru I

Sponsored by:

7:00 am - 10:00 am

Registration - Grand Ballroom Lobby

6:30 am - 8:30 am

Exhibit Areas Open

Conference Center Room

8:30 am - 9:30 am

Association Business Meeting-Chair Kessler & President Hawk

Grand Ballroom

Roll Call of Counties Present

Report of Committee's

President's Report of the Board Election of New WCHA Vice Chair

9:30 am - 10:00 am

Refreshment Break in Inside Exhibit Area

Sponsored by:

10:00 am

Exhibit Areas Closed

10:00 am - 11:00 am

Grand Ballroom

Innovative Technology for Highway Departments (1.0 PDH)

Moderator, WCHA President, Roland Hawk, Wood County

General Educational Session

General Educational Session

11:00 am – 12:00 pm

Leadership Opportunities (1.0 PDH)

Grand Ballroom

WCA President (Wood County)

Moderator, WCHA President - Roland Hawk, Wood County

12:00 pm - 1:00 pm

Special Honors Luncheon - In conference room A thru I (by inside vendors)

Luncheon Sponsor(s):

CRAIG HARDY HIGHWAY COMMISSIONER WWW.IOWACOUNTY.ORG

2024-2025 State Fiscal Budget Hearing – Wisconsin Dells 04-12-2023

Issue: Transportation Funding.

I would like to commend the legislature for recent enhancements in transportation funding.

Increases to General transportation Aids (GTA) in recent budgets has helped to slow declining revenues.

When originally created GTA was established as a 32% matching program, more recently that match amount has dropped to 18% share of cost statewide.

Reviewing the GTA share of cost formula, 8 of the highest spending counties in the state receive $1/3^{\rm rd}$ of the funds; then next highest spending 18 counties in the state receive another $1/3^{\rm rd}$ of the funds; leaving the remaining 44 counties in the state to split the last $1/3^{\rm rd}$.

Due to its' cost based foundation; depending on what amount any given county is spending; even if program increases are given a county could see a decline in GTA funds given to it (See attached table of GTA funding summary).

Due to the above issues; GTA only amounts to 12% of Iowa County's overall highway department revenues.

Increases to funding are necessary, but also some methodology based on the amount of infrastructure maintained not solely cost to support rural communities with more infra-structure.

I commend the legislature for development of the LRIP-Supplemental program and funding.

LRIP is the most economical, easiest to implement, and quickest to turnaround funding mechanism local governmental entities have to put the funds to the pavement and make meaningful infra-structure improvements.

It makes a difference, but we still have a long way to go.

The \$1.0M in in LRIP-supplemental received by Iowa County will cover about 18% of the overall 6.2 mile improvement it is designated for.

There is substantial need in LRIP.

There is need for a small bridge funding mechanism as well.

Locally, rural counties and communities struggle to come up with matching grant funds necessary for larger improvement projects.

Legislatively these grant programs call for a 50-50 or 80-20 (state-local) funding match. In reality the matching amounts are 25-75% or 60-40% (state-local) for these programs. Requires a larger share of cost for the locals to utilize them due to:

Increased requirements for locally 100% funded pre-designed shovel ready construction Grant funding competitiveness for systems other than road and bridge.

Increased administrative reporting and compliance burdens.

Changing environmental impacts and mitigation costs.

Unfunded local, state, and federal program mandates imposing increasing fiscal impacts. At the local level, we struggle with:

Increased design engineering costs:

Increased agency coordination and construction mitigation costs due to the large amount of infra-structure in right-of-way. Project design conflicts with

telephone, gas, broadband, fiber optic, internet, television, electrical, water, sanitary sewer, manure, other both public and private infra-structure.

Each of these create their own unique nuances with

mitigation, relocation, analysis, engineering, removal and replacement, coordination, scheduling,

Compensability payments for utility relocations: Some cases, proactive Utility companies (ATC) install expensive distribution infra-structure lines just outside of highway right of way using highway right of way for a portion of their utility easement, and then acquire the other half portion on adjacent property. When future highway improvement projects are completed; the utility infra-structure becomes a compensable relocation expense by the Highway project; which inflates highway construction costs.

Increased local cost share for projects - funding competitiveness and program implementation is driving more and more towards shovel ready design to implement funding availability to projects sooner – faster turnaround.

Driven by the fact that it takes increasingly longer to complete highway designs due to coordination and permitting with other agencies

zoning, environmental, SHPO, historic, utilities, oversight, etc. to mention a few. This all leads to earlier 100% locally funded design for projects, which were previously funded 80%. Resulting in increased local cost share amounts.

Increased environmental coordination for ever-changing environmental impacts based on rule changes, new legislation, or interpretations of existing regulations. We deal with

invasive, endangered, threatened, special concern or interest species; all of which bring their own myriad of regulatory requirements and timeline restrictions or limitation on construction project completion. This increases costs for completion, places undue timelines on the construction industry to complete certain projects due to the timelines provided.

We see increased costs due to changes in regulatory reporting requirements. Historically we have designed storm water on the basis of a 25-year storm event intensity rate. We recognized some localized flooding could/would occur but it was accepted as being balanced with what the costs for designing infra-structure with a 100-year life. With changing atmospheric data, compliance review and environmental permitting is driving the analysis to raise the design parameters, which leads to increases in infra-structure sizing, impacts, and cost for replacements; which were never originally intended to resolve.

We see increased administrative burdens and paperwork for permitting processes. We operate and own our own quarries to help with managing material needs and disposal of waste materials on projects. We permit those quarries through reclamation plans and stormwater designs for certain event life such as 25 or 50-year pond designs. Recently, the WDNR modified their reporting requirements for storm water event reporting to occur after every 0.5 inch rainfall event. The systems are designed to handle 25 or 50 year events, which are roughly a 3.5 to 4+ inch rainfalls. But now we are required to provide additional administrative compliance burdens for inspecting, tracking, and reporting for events which are occur on a frequent basis that are a fraction of the event the system is designed for.

We deal with a pressurized labor market; fueled by a lack of available workers and competition for recruitment as well as retention. County highway departments are unique, most employees are trained internally by the Department to perform the tasks they complete, seldom do we hire someone with the skill set and background to go right to work in our duties.

We provide some 30+ mandated new employee and annual training programs we must comply with ranging from Federal work rules to safety compliance including bloodborne pathogens, confined space, hearing conservation, chainsaw operation, competent excavations, forklift, equipment operation, workzone traffic, flagging traffic, MSHA, OSHA, and others.

Tax levy caps to net new construction limit or restrict our ability to provide wage increases which match inflation. Tax levy caps limited to net new construction do not allow us to meet health care cost increases; thereby passing a larger share of the cost onto the employees; or consider increased deductible share plans.

We struggle with completion of daily routine work tasks. Iowa County Highway Department has not been fully staffed since August of 2021, and continues with ongoing recruitments. Typically for winter snow emergency events we are doubling up routes, thereby increasing snow removal cycle timeframes due to staffing shortages.

We deal with inflationary measures, recently sparked by the Covid-19 pandemic. Between 2008 and 2014 we witnesses a 127% labor increase and 155% material increases. More recently inflation has spiked again, our snow plow truck replacement costs have skyrocketed some 127% in two years climbing from a cost of \$225,000 / unit in 2021 to costing \$285,000 in 2023 – a \$60,000 increase for one unit. The County operates some 38 units all together.

We deal with shortages and unavailability of some products, goods, materials, etc. In some areas of the marketplace, the historic government buy discounts have gone away entirely due to constrained market availability.

We deal with the imposition of long term program related regulatory revisions as unfunded governmental mandates. The FHWA developed MUTCD (Manual of Uniform Traffic Control Devices) has been the standard the US since 1935, relative to workzone and traffic signage and marking. The MUTCD has been mandated for sue in Wisconsin by all governmental entities since circa 1970. The MUTCD sets minimal design criterion for objects within right of way, traffic control and directional signage, school zones, pavement markings, and other similarly traffic guidance devices. The MUTCD is in the process of mandating 6-inch wide pavement markings to be more compatible with autonomous vehicles. Initially, this requirement does not affect roads with a daily traffic volume of 6,000 / day (most roads in Iowa County). But, over time once adopted the actual volume criteria will gradually be ratcheted down; ultimately resulting in an imposition across all infra-structure.

We deal with changing and emerging technology which modifies our system approaches and competes for existing funding. MUTCD changes are being driven by changing technology with smart / autonomous vehicles. Currently none of the Iowa County township roads have any pavement markings on them, yet a lone of a certain size or reflectivity. In addition, the pavement width of 6-inch lines compared to the Wisconsin state statutory minimum town road width of 18 feet, makes implementation of the standard on Wisconsin town roads noncompliant – the roads would be too narrow.

In closing I appreciate legislature's recent increases for transportation funding. There is a lot of competing need for funding within our improvement projects ranging from inflationary counter-

measures, increased regulations, increased administrative oversight burdens, environmental impacts, right of way acquisition costs, utility coordination, relocation and mitigation, and etc., new and emerging technology, and so on. <u>Continued increases in investment are drastically needed at the rural local level.</u>

Iowa County GTA revenues as a share of all Highway Revenues.
